ABSTRACT

Rising maternal employment, welfare reform, and increased preschool enrollment contribute to accelerating family demand for child care in California, and federal and state governments have responded by doubling support for child care and preschool programs between 1996 and 1999. However, there is little information available on how child care supply is distributed throughout the state and how demand will increase due to welfare reform. The Part one report presents preliminary information on 32 early indicators of child care supply and demand for all zip codes statewide to inform local and state planning and budgeting efforts. The report's introductory section defines demand and supply, discusses limitations of the data, and cautions planners in their use. The bulk of the report is comprised of the child care indicators, organized into five tables: (1) basic capacity of child-care providers by zip code, including number of centers, number of family child-care homes (FCCH), and number of licensed exempt providers; (2) characteristics of centers and FCCHs, including percentage open on weekends, evenings, or overnight and percentage with at least one Spanish-speaking staff member; (3) capacity levels standardized for child population by zip code, including capacity for preschoolers, school-age children, and children from welfare-supported families; (4) counts of all children and children in welfare-supported families, including counts of infants, preschoolers, and school-age children; and (5) families, mean household income, and maternal employment by zip code. Appended is a table delineating code values for each

An introductory note

California's child-care system has long been comprised of a vast and vibrant collection of service providers, community organizations, and activists. Decentralization and diversity represent rich strengths within the child-care community.

But this decentralized history also has resulted in limited planning capacity in Sacramento and a paucity of sound data on the supply of, and the rise in family demand for, child care. Never has the need been greater for solid data on the supply of and demand for child care—indicators that are useful to local and state-level planners and policy makers.

Parents' rising propensity to enroll their children in preschool programs, climbing maternal employment rates, and welfare reform all contribute to accelerating family demand for child care.. Federal and state governments have responded dramatically: public support for child-care and preschool programs will double in California between 1996 and 1999, reaching almost $1.8 billion in annual public funding.

But little information has been available which allows local or state agencies to target new monies on communities where supply is most scarce. We have not understood how child-care supply is distributed among counties or among different neighborhoods within counties. No one knows how much child-care demand will increase as a result of welfare reform, or what it would take to equalize access to licensed child-care programs.

Child Care Indicators 1998 attempts to remedy the impoverished state of data. These are preliminary figures, providing early indicators of child-care supply and demand for all zip codes statewide. These numbers do not lead directly to any policy or budget decision. Local planners and activists must consider zip-code level data carefully, applying their local knowledge about supply and likely growth in demand. Zip codes do not reflect local residents' own definition of their community.

Later this year we will publish a more complete set of indicators and county-level averages for each indicator. In addition maps are presently being designed to more vividly display selected supply and demand indicators. The second round of indicators will include data on working-poor families (living below 75 percent of the state median income) and new counts of child-care and preschool staff for zip codes, based on census data.

The brief indicators guide which follows describes each of the 32 supply and demand statistics reported in the present data tables.

Child Care Indicators 1998 is supported by the Child Care Planning Project, an initiative of the California Department of Social Services. Special thanks go to Dave Dodds, Bill Jordan, and Martha Lopez at CDSS.

Our earlier work was funded by the Packard Foundation's Center for the Future of Children. We are forever grateful for the steady support expressed by Marie Young and the Foundation's Board. Annelie Strath at Stanford University manages our data files. Paul Smilanick at CDSS has been tireless in contributing core data. Diana Smith and Katherine Jones designed and produced this report. Part of our work is supported by a parallel grant from the Child Care Bureau, U.S. Department of Health and Human Services.

GUIDE TO THE CHILD-CARE INDICATORS

The data tables appearing below provide a snapshot of current levels of child-care supply and potential gains in family demand. These tables focus on zip-code level indicators, since many local planners are currently deciding how to allocate new child-care monies and equalize family access to providers.

Later in 1998 we will distribute county-level indicators and a few additional indices at the zip-code level. We also are working with the California Department of Social Services (CDSS) on how Sacramento and local counties can track changes over time in the supply of and demand for child-care programs.

Analysis which informs planning and budgeting

Until 1997, no agency in California held the capacity to analyze uniform data on the local availability of three types of child-care providers: preschools or centers, family child-care homes (FCCHs), and subsidized licensed-exempt providers. During the early 1990s the California Child Care Resource and Referral Network (CCCRRN), working with the 61 state-funded R & R programs, developed a uniform method of collecting data on active child-care providers, supported by the California Department of Education, the David and Lucile Packard Foundation, and the Miriam and Peter Haas Fund. The first analysis of county-level child-care supply—the Child Care Portfolio—was published in 1997 by CCCRRN. Later that year an initial analysis of supply disparities among local zip codes was published by Policy Analysis for California Education (PACE) in collaboration with CCCRRN.[1]

The new Child Care Planning Project aims to improve upon this earlier work by (1) developing a more complete set of supply indicators and new measures for estimating where family demand is likely to grow, (2) assessing how new child-care monies can help to shrink existing inequities in supply, and (3) working in three counties to study supply and demand changes over time. In the context of state and local policy questions, the legislature's recent push to advance the planning capacities of county advisory councils is very relevant to the CDSS-sponsored project. The child-care indicators reported below are intended to aid their planning process.

Defining child-care supply. A fixed "supply" of providers does not exist, not in the way that schools or hospitals offer stable services. FCCHs are born and die at a fairly rapid rate. Providers exempt from licensing—described as providers caring for children of only one family in addition to their own, such as kin members, close friends, and babysitters—may provide services on a temporary basis. In contrast, preschools and centers are relatively stable organizations, although the number of available slots and families' access to them depends upon the flow of subsidies in low-income communities. In the terminology of economists, child care is comprised of segmented markets of providers: some communities are dominated by subsidized providers, while more affluent neighborhoods contain programs financed solely by parental fees. Only the latter segment approximates a market, where supply follows the expression of family demand. In low-income and middle-class areas, parents lack the purchasing power to effectively shape supply.

When we talk about "supply" we refer to the presence or availability of an organization or individual who currently provides child-care services. For licensed centers and FCCHs the CCCRRN data, collected by local resource and referral agencies, pertain to maximum licensed capacity, not actual enrollments. Licensed exempt providers are included only if they receive a voucher subsidy and have cleared the TrustLine criminal background check. No uniform data exist on the permanence of these providers or on current vacancy rates for centers and FCCHs. After school programs operated by public schools and other agencies are often exempt from child-care licensing.[2]

Defining family demand for child care. The "need" for child care and early education programs across counties and local communities is difficult to determine. In the past, federal and state monies have been distributed on the basis of relative need, such as family poverty levels, welfare caseloads, or rural location. This method, however, has not always given adequate weight to existing levels of child-care supply. Given welfare reform, we also should consider which counties or communities are most likely to have stronger labor demand for welfare clients. Expanding supply may not be sensible where availability is sufficient in light of existing levels of family demand. In short, allocation decisions must take into account the balance between local supply and likely demand levels.

One simple remedy is to standardize supply indicators by the number of children residing in a zip code. The argument here is that if the ratio, for example, of center slots across a set of zip codes for every 100 resident children, was equal, then availability would be equal, given each community's child population. This logic also stems from the argument that equal access is sound public policy, regardless of local employment demand. Building from this simple approach, we report these basic ratios for preschool and school-age children.

The complication is that child-care expansion, in part, aims to move thousands of single mothers from welfare to work. The growth in demand for child care will stem from the ability of parents to find jobs, that is, the strength of local labor demand. Welfare agencies' ability to effectively distribute new child-care subsidies represents an additional factor. This suggests that additional indicators of likely demand growth are important to consider.

We offer an initial set of demand indicators below. We also are examining zip-code level data on the employment rate and earnings of TANF clients in 1997. This will provide a more detailed picture of where successful welfare-to-work transitions—and thus a rise in child-care demand—are more consistently observed.

Limitations

Existing data are limited in a few important ways. The new supply data for centers and FCCHs are very recent, compiled in January 1998. However, child population and other basic numbers for zip codes come from the 1990 census. We experimented with estimating population growth rates, however, estimation models proved unreliable at the zip-code level.

Second, our earlier analyses have prompted debate over the utility of zip codes in defining local communities. They do not map neatly against natural communities. Some parents take their child to a provider who resides outside the family's zip code. At times a zip will be comprised of office buildings or contain very few children. This distorts ratio measures, as you will see for some zips in the tables below. But zip codes provide a relatively small unit within counties for which a wealth of census and welfare data are available. We are studying census tracts as a smaller unit, yet this level of analysis holds limitations as well.

Third, planners in Sacramento will be able to track—to a limited extent—growth in child-care demand among CalWORKs parents and the working poor. But local policy makers and planners also need to know which agencies are able to increase the utilization rate at which parents are using their child-care subsidy. The ability of local child-care providers, alternative-payment agencies, and welfare offices to collectively track actual growth in demand within low-income communities remains highly constrained.

Fourth, no capacity exists to assess variation in the quality of child-care providers operating among local communities. Recent legislation and new appropriations in Sacramento aim to simultaneously expand supply and raise quality. But not even a rudimentary method exists to track change in quality at state or local levels. PACE will publish a research report in late 1998 which details cross-community variation in child-care center and FCCH quality in four counties based on a sample survey.[3]

CHILD CARE INDICATORS—PART I

The initial indicators are organized below in five tables. The first three tables contain child-care supply indicators, both raw numbers and ratios which are standardized for variation in child populations resident in the zip code. The remaining two tables provide data on family demand indicators. Every California zip code for which sufficient data exist is listed. If the zip code has fewer than 10 preschool or school-age children, ratio measures were not calculated. Again, this is so per capita ratio measures are not misinterpreted.

Each table includes the county ID number in which the zip is located. If a zip spans the border running between two counties, it is assigned to the county for which a majority of the child-care capacity is located. A listing of the 58 county ID numbers appears at the end of this volume. If you cannot find a particular zip code, please contact PACE.

The numbers appearing next to each definition below correspond to the column numbers appearing in the tables.

Supply Indicators Table 1A: Basic Capacity of Child-Care Providers by Zip code

1. Number of child-care centers operating January in 1998. Source: CCCRRN.
2. Number of licensed and active FCCHs currently operating in January 1998. Source: CCCRRN.
3. Number of licensed exempt child-care providers approved through TrustLine in 1996 and 1997. Source: CCCRRN.
4. Licensed capacity of centers for infants younger than 2 years-old, 1998. Source: CCCRRN.
5. Licensed capacity of centers for preschoolers age 2-5 years-old, 1998. Source: CCCRRN.
6. Licensed capacity of centers for all young children, age 0-5, 1998. Source: CCCRRN.
7. Licensed capacity of centers for school-age children, age 6-14 years-old, 1998. Source: CCCRRN.
8. Total licensed capacity of FCCHs, independent of age of children served, 1998. (Calculated at 8 for small family child-care homes and 14 for large family child-care homes.) Source: CCCRRN.

Supply Indicators Table 1B: Characteristics of Centers and Family Child-Care Homes (FCCHs)

9. Percentage of centers open on weekends, evenings or overnight, 1998. Source: CCCRRN.

10. Percentage of FCCHs open on weekends, evenings or overnight, 1998. Source: CCCRRN.

11. Percentage of centers with at least one Spanish-speaking staffer, 1998. Source: CCCRRN.

12. Percentage of FCCHs with at least one Spanish-speaking staffer, 1998. Source: CCCRRN.

13. Percentage of FCCHs choosing school-age licensing option, 1998. Source: CCCRRN.

14. Capacity of centers with Spanish-speaking staff per 100 resident Spanish-speaking children, 0-14 years-old, 1998. Source: CCCRRN.

15. Capacity of FCCHs with Spanish-speaking staff per 100 resident Spanish-speaking children, 0-14 years-old, 1998. Source: CCCRRN.

Supply Indicators Table 1C: Capacity Levels Standardized for Child Population by Zip Code

16. Capacity of centers for preschool-age children per 100 resident children, age 0-5. Sources: CCCRRN (1998) and U.S. Bureau of the Census (1990).

17. Total capacity of FCCHs per 100 resident children, age 0-5. Sources: CCCRRN (1998) and U.S. Bureau of the Census (1990).

18. Capacity of centers for school-age children, per 100 resident children, age 6-14. Sources: CCCRRN (1998) and U.S. Bureau of the Census (1990).

19. Total capacity of FCCHs per 100 resident children, 6-14. Sources: CCCRRN (1998) and U.S. Bureau of the Census (1990).

20. Capacity of centers for preschool-age children, age 0-5, per 100 resident TANF children, 0-5. Sources: CCCRRN (1998) and CDSS (1997).[4]

21. Capacity of centers for school-age children, age 6-14, per 100 resident TANF children, 6-14. Sources: CCCRRN (1998) and CDSS (1997).

22. Capacity of FCCHs without regard to age per 100 resident TANF children, 0-5. Sources: CCCRRN (1998) and CDSS (1997).

23. Capacity of FCCHs without regard to age per 100 resident TANF children, 6-14. Sources: CCCRRN (1998) and CDSS (1997).

Demand Indicators Table 2A: Counts of All Children and Children in Welfare-Supported Families

24. Count of all resident children, age 0-5. Source: U.S. Bureau of the Census (1990).

25. Count of all resident children, age 6-14. Source: U.S. Bureau of the Census (1990).

26. Count of children in TANF-supported households, younger than 2 years-old. Source: CDSS (1997).

27. Count of children in TANF-supported households, 2-5 years-old. Source: CDSS (1997).

28. Count of children in TANF-supported households, 6-14 years-old. Source: CDSS (1997).

Demand Indicators Table 2B: Families, Mean Household Income, and Maternal Employment by Zip Code

Source: Department of Social Services (DSS) Child-Care Planning Project.
Data compiled by the California Child Care Resource and Referral Network and Policy Analysis for California Education (PACE).

Warning: These are preliminary numbers, August 1998.
High ratio numbers may reflect the fact that few young children reside in a zip code.

Source: Department of Social Services (DSS) Child-Care Planning Project.
Data compiled by the California Child Care Resource and Referral Network and Policy Analysis for California Education (PACE).

Warning: These are preliminary numbers, August 1998.
High ratio numbers may reflect the fact that few young children reside in a zip code.

Source:)SS) Child Care Planning Project.
e California Child Care Resource and Referral Network
and Policy Analysis for California Education (PACE).

Warninger 1998. High ratio numbers may
ect the fact that few young children reside in a zip code.

Source: Department of Social Services (DSS) Child-Care Planning Project. Data compiled by the California Child Care Resource and Referral Network and Policy Analysis for California Education (PACE).

Warning: These are preliminary numbers, August 1998. High ratio numbers may reflect the fact that few young children reside in a zip code.

Source: Department of Social Services (DSS) Child-Care Planning Project.
Data compiled by the California Child Care Resource and Referral Network and Policy Analysis for California Education (PACE).

Warning: These are preliminary numbers, August 1998.
High ratio numbers may reflect the fact that few young children reside in a zip code.

THICKER DATA ON CHILD-CARE SUPPLY AND DEMAND DISPARITIES

Recently we published Part I of *Child Care Indicators 1998.* The present report represents Part II of this same series—aimed at providing local and state-level policy makers more complete data on the current capacity of the child-care system, as well as indicators of where growth in family demand may be observed in the coming years.

Part II provides three new sets of information. First, we have added county-level aggregates for all zip code indicators reported in the Part I volume. Raw counts, such as the number of child slots inside preschools and centers, simply represent total counts for each county. Ratio measures, for instance the number of family day-care home slots per 100 preschool-age children, were calculated for the entire county.

Second, we have extended the zip code tables to include newly available data on how many single parents supported by the state's welfare program report job-related income and the level of these earnings. These indicators help to gauge levels of job demand for women with limited job experience or skills.

The most urgent need for expanded child-care capacity is in those counties and communities where single parents, supported by CalWORKs, are most likely to find jobs. It is in these locales that demand for non-maternal child-care arrangements will climb most rapidly. We also include estimates for the number of families who earn less than 75 percent of California's median income. These numbers suggest an additional layer of working-poor families who could benefit from quality child care and preschool programs.

Finally, we have added new data on the size of the child-care workforce in each county. These data come from the Census Bureau's individual returns for the 1990 census. These counts of how many individuals make a living as a child-care center teacher or director of a family day-care home are somewhat old. But they provide additional insight into the wide disparities in the availability of child-care services across counties. The census data also reveal the large number of local residents who depend upon the child-care industry for their own livelihood.

Additional copies of Part I, Part II, and electronic files are available from PACE at cost.

We enthusiastically thank Diana Gomby and Marie Young at the Center for the Future of Children, David and Lucile Packard Foundation. The Foundation has steadily supported the Network's efforts to standardize data collection on child-care capacity statewide. More recent grants to PACE have allowed us to analyze supply and demand data and to make it available in more user-friendly forms.

Child Care Indicators 1998 is a publication of the *Child Care Planning Project,* funded by the California Department of Social Services (CDSS). Thanks are due to David Dodds, Bill Jordan, and Martha Lopez for their vision and practical interest in how to help counties and school authorities allocate new child-care and preschool funds more wisely. A parallel grant from the HHS Child Care Bureau further supports our work. A hearty thanks to Pia Divine in Washington D.C. Paul Smilanick at CDSS provided the new data on job earnings for welfare families. Annelie Strath at Stanford University has built our data file over the past two years. We greatly miss Fran Kipnis who designed the basic building blocks.

As with the Part I volume, we welcome your comments on the indicators which have been selected and on how these numbers can be given more meaning in future years. Thank you all.

UPDATED GUIDE TO INDICATORS, PART II

The previously published Part I of *Child Care Indicators* provided a detailed explanation of the development of the data. We encourage you to review that information as you examine the tables presented below. In particular, we urge you to pay attention to the limitations of the data. These county and zip code data can inform child-care policy makers and planners. But they provide only a tool.

The new zip code level population data presented in this volume are from the 1990 census (columns 33 and 34) and from the California Department of Social Services (columns 35, 36, and 37). The figures for the estimated number of children in families with earnings under $30,000 (column 34) were calculated by Jon Stiles at UC DATA, a division of the Survey Research Center, UC Berkeley. This information is useful for estimating the number of children potentially eligible for subsidized child care, although it does not account for families who have more than two children and may be eligible for subsidies even when their annual earnings exceed $30,000.

We have added counts of child-care workers, including all individuals who reported earnings from their work as a center teacher or family home provider (columns 16 and 17). These data were compiled for all zip codes by the Census Bureau. Several agencies co-financed the bureau's development of these data. We thank Martha Moorehouse (U.S. Department of Health and Human Services), Lindsay Chase-Lansdale (Northwestern University), and Sandra Hofferth (University of Michigan) for joining PACE on this effort. These data also allow us to examine the informal market of individual child-care providers.

CHILD CARE INDICATORS, PART II

The indicators below are organized in six tables. The first three tables contain *county level* supply indicators, including raw numbers and ratios which are standardized for child populations resident in each county. The remaining two tables provide data on family demand indicators. The last table offers additional *zip code level* data on potential demand indicators.

If a zip code spans the border between two counties, it is assigned to the county for which a majority of the child-care capacity is located. A listing of the 58 county ID numbers appears at the end of this volume. If you cannot find a particular zip code, please contact PACE.

The numbers appearing next to each definition below correspond to the column numbers appearing in the tables.

Supply Indicators Table 1A: Basic Capacity of Child-Care Providers by County

1. Number of child-care centers operating in January 1998. Source: CCCRRN.[1]
2. Number of licensed and active FCCHs operating in January 1998. Source: CCCRRN.
3. Number of license-exempt child-care providers approved through Trustline in 1996 and 1997. Source: CCCRRN.
4. Licensed capacity of centers for infants younger than 2 years old, 1998. Source: CCCRRN.
5. Licensed capacity of centers for preschoolers age 2-5 years old, 1998. Source: CCCRRN.
6. Licensed capacity of centers for all young children, age 0-5, 1998. Source: CCCRRN.
7. Licensed capacity of centers for school-age children, age 6-14 years old, 1998. Source: CCCRRN.
8. Total licensed capacity of FCCHs, independent of age of children served, 1998. (Calculated at 8 for small family child-care homes and 14 for large family child-care homes.) Source: CCCRRN.

Supply Indicators Table 1B: Characteristics of Centers and Family Child-Care Homes (FCCHs) by County

9. Percentage of centers open on weekends, evenings, or overnight, 1998. Source: CCCRRN.
10. Percentage of FCCHs open on weekends, evenings, or overnight, 1998. Source: CCCRRN.
11. Percentage of centers with at least one Spanish-speaking staffer, 1998. Source: CCCRRN.

12. Percentage of FCCHs with at least one Spanish-speaking staffer, 1998. Source: CCCRRN.

13. Percentage of FCCHs choosing school-age licensing option, 1998. Source: CCCRRN.

14. Capacity of centers with Spanish-speaking staff per 100 resident Spanish-speaking children, 0-14 years old, 1998. Source: CCCRRN.

15. Capacity of FCCHs with Spanish-speaking staff per 100 resident Spanish-speaking children, 0-14 years old, 1998. Source: CCCRRN.

16. Preschool and center teachers per 1,000 children, 0-5 years old. Source: U.S. Bureau of the Census (1990).

17. FCCH workers per 1,000 children, 0-5 years old. Source: U.S. Bureau of the Census (1990).

Supply Indicators Table 1C: Capacity Levels Standardized for Child Population by County

18. Capacity of centers for preschool-age children per 100 resident children, age 0-5. Sources: CCCRRN (1998) and U.S. Bureau of the Census (1990).

19. Total capacity of FCCHs per 100 resident children, age 0-5. Sources: CCCRRN (1998) and U.S. Bureau of the Census (1990).

20. Capacity of centers for school-age children, per 100 resident children, age 6-14. Sources: CCCRRN (1998) and U.S. Bureau of the Census (1990).

21. Total capacity of FCCHs per 100 resident children, age 6-14. Sources: CCCRRN (1998) and U.S. Bureau of the Census (1990).

22. Capacity of centers for preschool-age children, age 0-5, per 100 resident TANF children, age 0-5. Sources: CCCRRN (1998) and CDSS (1997).[2]

23. Capacity of centers for school-age children, age 6-14, per 100 resident TANF children, age 6-14. Sources: CCCRRN (1998) and CDSS (1997).

24. Capacity of FCCHs without regard to age per 100 resident TANF children, age 0-5. Sources: CCCRRN (1998) and CDSS (1997).

25. Capacity of FCCHs without regard to age per 100 resident TANF children, age 6-14. Sources: CCCRRN (1998) and CDSS (1997).

Demand Indicators Table 2A: Counts of All Children and Children in Welfare-Supported Families by County

26. Count of all resident children, age 0-5. Source: U.S. Bureau of the Census (1990).

27. Count of all resident children, age 6-14. Source: U.S. Bureau of the Census (1990).

28. Count of all children in TANF-supported households, younger than 2 years old. Source: CDSS (1997).[1]

29. Count of all children in TANF-supported households, 2-5 years old. Squrce: CDSS (1997).

30. Count of all children in TANF-supported households, 6-14 years old. Source: CDSS (1997).

Demand Indicators Table 2B: Families, Median Household Income, Maternal Employment and TANF Participation by County

31. Number of employed mothers with at least one preschool-age child. Source: U.S. Bureau of the Census (1990).

32. Percentage of mothers who have a preschool-age child and who are employed. Source: U.S. Bureau of the Census (1990).

33. Number of resident families with children under 18 years old. Source: U.S. Bureau of the Census (1990).

34. Estimated number of children in families with earnings under $30,000. Source: U.S. Bureau of the Census (1990) and UC Berkeley estimate.

35. Number of single parents participating in TANF in 1997 (3rd quarter). Source: CDSS (1997).

36. Number of single parents participating in TANF and employed in 1997 (3rd quarter). Source: CDSS (1997).

37. Median annualized earnings of employed TANF parents in 1997. Source: CDSS (1997).

38. Median income of all households. Source: U.S. Bureau of the Census (1990).

Demand Indicators Table 3A: Families, Household income, and TANF Participants by Zip code

1. Number of resident families with children under 18 years old. Source: U.S. Bureau of the Census (1990).
2. Estimated number of children in families with earnings under $30,000. Source: U.S. Bureau of the Census (1990).
3. Number of single parents participating in TANF in 1997 (3rd quarter). Source: CDSS (1997).
4. Number of single parents participating in TANF and employed in 1997 (3rd quarter). Source: CDSS (1997).
5. Median annualized earnings of employed TANF parents in 1997. Source: CDSS (1997).
